

CABLE & WIRELESS

**InfoValue Computing and Cable & Wireless
Establish a Partnership to Provide a State-of-the-Art,
High Definition, IP-Based entertainment solution in the Caribbean.**

The Challenge:

Cable & Wireless (C&W) is the market leader in the delivery of voice and data telecommunications throughout the Caribbean. Given the high concentration of hotels and resorts, the lack of a dominant content provider, and the logistical challenges of working across multiple islands and sovereign jurisdictions; Cable & Wireless is uniquely positioned to conduct a rapid market deployment of content services and support in the region.

The InfoValue Solution:

InfoValue's SuiteTV solution provides hoteliers with an entirely IP based, high definition in-room solution that is fully customizable and scalable to the needs and requirements of the hotel. Features that are offered by InfoValue include; an interactive Electronic Program Guide (EPG) to navigate Free-To-Guest channels, High Definition Video On Demand (VOD), Network Personal Video Recording (nPVR), Time-Shift TV (TSTV), and many more. The SuiteTV system also presents the unique ability for the hotel to dynamically communicate with its guests through the system, an information and entertainment portal if you will.

SuiteTV features InfoValue's industry leading IPTV and streaming platform to ensure seamless integration, 24x7 reliability, unlimited scalability and open architecture for future expansion.

The Epilogue:

Cable & Wireless expects significant deployment volume starting in 2009, and concurrently, InfoValue expects to establish a new standard for in-room entertainment with Cable & Wireless in Caribbean. InfoValue's SuiteTV can also be used in other hospitality applications such as hospitals, dorm rooms, MDU's and more.unity and more.
